

## PRESS RELEASE

### Maxim Watermakers Launches RO Line for Offshore Oil & Gas Market

FOR IMMEDIATE RELEASE

Shreveport, LA, May 23, 2014 – Company officials announced today that Maxim has launched a new line of Seawater Reverse Osmosis desalination systems for offshore oil & gas applications.

Maxim's Offshore Oil & Gas line, *The Titanium Series*, offers water production capacities of 16,000 and 32,000 GPD.

“Maxim is growing its core business of standard water makers and is excited to offer clients a choice for their desalination needs. We believe the addition of *The Titanium Series* compliments our existing product lines, according to Brian Hebert, Maxim's president.”

Maxim offers a line of seawater reverse osmosis desalination systems for the Commercial Marine market with water production capacities ranging from 1,000 GPD to 6,000 GPD. Maxim continues to offer waste heat recovery evaporators. Models are available with capacities from 192 up to 15,000 gallons per day. Custom sizes are available for Maxim's heat recovery evaporators and reverse osmosis product lines to meet your unique needs.
